

How to Use a Viper Tool with a Lagmaster Pole Tool

Lagmaster Plus plug-in studs make your Lagmaster an adjustable pole for Viper™ or Ladd™ powder actuated tools. Great for installing pre-wrapped wire and angle clip assemblies, EMT clips and smooth rod & spring clip assemblies (Flash Fasteners).

Viper tool shown with smooth rod and spring clip assembly.

1
Plug in the proper Lagmaster Plus stud and attach the powder-actuated tool to the Lagmaster telescoping pole. Always follow the manufacturer's instructions for using the Viper or Ladd tool.

2
Raise the tool against the ceiling (concrete or structural steel) and hit the tool against the ceiling to set it off.
